Application/Control Number: 10/578,018

Art Unit: 3651

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 and 8-20 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 60000931.

The Japanese Patent shows a belt 10 with a bearing side 2, a backing side 4, an embedded reinforcement carrier and the bearing side is reinforced with ball-type elements S1.

Re claim 2, the elements are disposed within at least one layer 1'.

Re claim 3, Figures 1 and 4 show the elements S1 in a single layer.

Re claim 4, the elements S1 certainly are close to the reinforcement carrier P1.

Re claim 5, the layer is disposed in the center of the bearing side.

Re claim 6, the layer is completely embedded and can be consider "close" to the surface of the bearing side.

Re claim 8, the ball-type reinforcement extends parallel to the edges of the belt.

Re claim 9, the ball-type reinforcement extends throughout the length of the belt.

Re claim 10, the reinforcement covers the claimed partially as well.

Re claim 11-15, the Abstract discloses the claimed types of materials.

Re claim 16, the elements are shown as having the same diameter.

Re claims 17-20, the Abstract discloses ranges of diameters which fully anticipate the claimed ranges.

Application/Control Number: 10/578,018

Art Unit: 3651

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over JP 60000931 in view of Sawa et al. (US 2003/0085104).

The Japanese Patent does not show the reinforcement elements as extending over the entire width of the belt. However, shown by Sawa et al. are reinforcement elements 10 which do extend over an entire belt width. To have such with the Japanese Patent would have been obvious to one of ordinary skill in the art in order to ensure the whole belt is reinforced.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James R. Bidwell whose telephone number is (571)272-6910.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gene O. Crawford, can be reached on 571-272-6911. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for

Art Unit: 3651

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
